SUMMARY

Third-year B.Tech (CSE) student at Chandigarh University and founder of wrenchy.in — a production-deployed Java 21 / Spring Boot microservices platform for home appliance repair, grounded in a 35-year-old family parts-and-repair business (SK Electronics, 1991). Focused on Java backend engineering, REST APIs, event-driven systems, and cloud deployment.

SKILLS

Languages: Java (primary), JavaScript, SQL, Bash
Backend and Frameworks: Spring Boot, Spring Cloud Gateway, Spring Data JPA, Spring Security, Spring Web MVC, Spring for Apache Kafka, REST API design, Microservices architecture, Event-driven systems, OAuth 2.0 / JWT
Frontend: React, Vite, Tailwind CSS, Axios
Data and Messaging: PostgreSQL, Redis, Apache Kafka
Cloud and Infrastructure: Microsoft Azure (Virtual Machines, DNS), Cloudflare (Pages, DNS), Docker, docker-compose, Caddy (reverse proxy, automatic TLS), Linux administration
Business Intelligence: Microsoft Power BI (basic) — dashboards, data modelling, DAX measures
Tools and Workflow: Git, GitHub, Maven, Postman, Agile (self-directed sprints), Flyway (database migrations)
Computer Science Fundamentals: Object-Oriented Programming, Data Structures (arrays, strings, linked lists, trees, graphs, heaps), Algorithms (binary search, recursion, dynamic programming basics), System design fundamentals, Relational database design

PROJECTS

wrenchy.in — Home Appliance Repair Platform
Founder and Sole Engineer · *[PLACEHOLDER: Start Month YYYY] – Present*
github.com/24bet10066/Taurus · wrenchy.in
Java 21, Spring Boot 3.3.5, Spring Cloud Gateway, PostgreSQL 16, Redis 7, Apache Kafka 3.7, Docker, Microsoft Azure, React, Cloudflare

- Designed and built a 9-service microservices backend (auth, gateway, job, parts, customer, technician, notification, payment, analytics) decomposed by bounded context from real shop operations; sync REST plus async Apache Kafka events (job.created, job.status.changed, payment.received, inventory.reorder-alert).
- Implemented gateway-enforced JWT authentication with Spring Security and Spring Cloud Gateway, Redis-backed OTP storage, and role-aware routing; downstream services trust validated X-User-Id / X-User-Role headers, removing duplicate auth logic across services.
- Deployed end-to-end on a Microsoft Azure VM via Docker Compose (PostgreSQL 16, Redis 7, Kafka 3.7); Caddy reverse proxy with automatic Let's Encrypt HTTPS; React frontend on Cloudflare Pages with global CDN. Tuned for low memory using Java 21 virtual threads and serial GC.
- Modelled a guarantee-backed repair lifecycle: 8-state job state machine (REQUESTED → ASSIGNED → IN_TRANSIT → AT_CUSTOMER → IN_PROGRESS → PARTS_NEEDED → COMPLETED / CANCELLED) linked to a parts catalogue and technician ledger, with a public no-auth booking endpoint and event-driven admin alerts via SMS and WhatsApp.

Hospital Resource Management — Power BI Dashboard
Personal project · *[PLACEHOLDER: month/year]*
github.com/24bet10066/Hospital-Resource-Management1
Microsoft Power BI, DAX, data modelling

- Built an interactive Microsoft Power BI dashboard on hospital resource allocation with multi-page navigation, slicers, and drill-through detail; modelled data via a star schema (fact + dimension tables) and authored DAX measures for capacity utilisation and trend analysis.

EXPERIENCE

SK Electronics — Banda, Uttar Pradesh
Family-Operated Spare Parts Retail and Home Appliance Repair Business (Established 1991)
Operations Associate · *[PLACEHOLDER: Year started] – Present*

- Contribute to daily operations of a third-generation appliance repair and spare-parts business covering AC, refrigerator, washing machine, water purifier, and water heater servicing across Banda district — approximately [PLACEHOLDER: X] repair jobs per month.
- Coordinate a network of [PLACEHOLDER: X] field technicians and track an SKU-level spare-parts inventory of [PLACEHOLDER: X] line items across multiple appliance brands (LG, Samsung, Whirlpool, Voltas, and others).
- Domain knowledge directly informed the data model, status workflow, and guarantee mechanism of wrenchy.in — fault categorisation, parts-to-job linking, and complaint accountability are all modelled from observed business reality.

EDUCATION

Chandigarh University, Mohali, Punjab
B.Tech, Computer Science and Engineering · *Expected May 2028*

ACHIEVEMENTS

- **Data Structures and Algorithms:** Active LeetCode practice across pattern-based problem solving — arrays, strings, linked lists, binary trees, graphs, heaps, binary search, dynamic programming. Profile: leetcode.com/u/itsAdityaG.
- **Languages:** Hindi (native), English (professional), Arabic ([PLACEHOLDER: basic, conversational, or professional]).
